DESCRIPTION OF ACCIDENT

(Brief narrative of accident. Include statement of responsibility and recommendations for action to prevent repetition)

The aircraft was taking eff. on an operational mission with three thousand four hundred (3,400) pounds of bombs and two thousand four hundred (2,400) gallons of gaseline. The runway was slick with ice and show and there was a slight cross wind, from the left. Wind velocity was about sixteen (16) miles per hour. The runway had been cleared of as much show as was possible prior to take off.

Lieutenant Whitesides had made a complete check on the aircraft and engine eperation prior to take off, and everything was normal. He advanced the throttles to 31" MP before releasing the brakes when in take off position, then advanced the throttles to full en position. Because of the cross wind he had to retail number three (3) engine and number four (4) engine throttles to aid in staying on the runway. About halfway down the runway he ran off the left side of the runway and became airborne about three fourths (3/4) of the way down the runway.

By the time the aircraft was airborne it was headed directly for a grove of trees and the co-pilot lowered one third (1/3) flaps to enable the aircraft to clear the trees. The number one (1) engine went out just after the aircraft became airborne. (Investigation found the number one (1) carburator was blown completely off the accessory section). The engineer reported that RPM's had started to drop on the number two (2) engine also, but investigation found no indication of any malfunction of the number two (2) engine.

The engineer attempted to turn the turbe control past the stop for emergency power but he did not succeed before the aircraft settled to the ground. We attempt was made to feather number one (1) engine.

The aircraft crash landed about one (1) mile northwest of the take eff runway.

Lieutenant Colonel Thacker, who was in the control tower during take off heard a back fire just as this aircraft was airborne. It is believed that a rapid throttle change must have been made to cause the back fire, but the crew denied that any such change had been made.

It is the epinion of this board that the pilot is one hundred (100) percent responsible for the accident in that he used poor technique in handling his aircraft on the take off. Had he kept his aircraft on the runway during take off it would not have been necessary to use flaps, and it would have been possible to sustain flight on three engines even with one (1) propeller windmilling, had the flaps not been lowered.

N HANSEN, Major, AC. Group S-4

J. W. LOTER, lst Lt, AC. F.C Officer.

H. G. HORAK, Capt, AC. Wea Officer. H. H. STROUD, Major, AC. Flight Surgeon.

The above listed ex-officios attended the board meeting.

FIVE HUNDRED FORTY SEVENTH BOMBERPARENT SQUADRON (H) ARMY AIR FORCES Office of the Operations Officer

13 January 1945

SUIJECT: Accident report on Aircraft 42-97263

: Group Operations Officer.

1. We started engines on time and let them warm up about 8 minutes. I then ran them up to 1500, checked mags and prop pitch and generators. After engine oil temperature was 60 degrees we ran up the engines in hardstand. No 1 Generator was turned on at 1500 RPM. Ran engines up without boost. Applied necessary bost for 16 inches - 2500 RPM. Each engine up O.K. with boost setting approximately 8. We waited in hardstand followed out proper ship, Each engine up O.K. with boost engines idling at approximately 1200. We followed ship into take-off position, applied 8 on turbo, locked tail wheel and turned on generators at 1500 RPM. Ran engines up to about 31 inches holding brakes until signal was given for take-off. Power was applied evenly until throttles were full open. As we got started down runway #3 and #4 throttles were slightly pulled back to correct for cross wind. When airspeed was 115 I applied full throttle on #3 and #4 and pulled ship off ground. Gear was pulled up and then engineer said #1's on fire. I didn't feather at first because of low altitude. The engineer then said #2 is out, I felt the ship mushing in. I tried to pull it up but seeing we were going to hit I closed #1 fuel shut-off switch. I held the ship off the ground as long as possible before we hit. I then closed remaining fuel shut-off switches, battery and master switch, and tried to get out side window. I was unable to get it open and seeing co-pilot and engineer gone decided escape hatch must be open. I got out through the escape hatch. I found navigator and toggelier lying in front of the plane. The navigator seemed to be in the most pain. We covered them both up with our jackets and gave both morphine. I tried to find flare pistor but was unable to do so. We waited about 30 minutes before ambulance found us. They took Navigator and Toggelier to the hospital with engineer who had cuts on his face. The rest of the crew followed later in another ambulance.

> JOHN B. WHITESIDE 2/dd Lt, AC

STATEMENT BY 2ND LT. JOHN P. MOXIEY, CO-PILOT, 0-831767, CONCERNING AIRCRAPT ACCIDENT ON 10 JANUARY 1945.

After starting our engines and giving them ample time to warm up, we began our usual check of engines. The props, mags, and turbos checked normally. We had to wait approximately ten minutes before taxiing. We followed several aircraft out to line-up for take-off. I rechecked the engines instruments before we lined up, they were all normal and seemed to be running very good. As we lined up I trailed the cowl flaps, turned on booster pumps and locked the tail wheel, The pilot eased on full throttle and manifold pressure came up to 46" Hg on all four engines with 2,500 RPM's. I don't remember exact reading of other instruments but I checked them all thoroughly as we started our take-off and know they were all normal and OK. We had some trouble keeping on runway and the pilot had to pull number 3 & 4 off some to keep on the runway. As we got near the end of runway he gave fall power again and we took off in a crab. I put down 1/3 flaps as we were close to trees at end of runway. I lifted the wheels on thurse the pilots' signal, soon after we were off the ground. About the same time the engineer No. 1 was on fire. I lacked out and saw fire coming out No. 1 engine. We started back down and hit before I could do anything and I don't remember any instrument readings from time No. 1 caught fire until we hit. I couldn't get my window upen and followed the engineer out escape hatch in tunnel.

> John C. Moxiles, 2nd Lt., Co-Pilot.

FIVE HUNDRED FORTY SEVENTH BOXBARDMENT SQUADRON (H) ARMY AIR FORCES Office of the Operations Officer

13 January 1945.

SUBJECT: Accident report on Aircraft 42-97263.

TO : Group Operations.

1. As a Radio Operator I didn't see much of what happened. All I knew was that the wheels were off the runway. Next thing I saw was No.1 engine on fire. I didn't call up because I knew that they had seen No.1 on fire. I thought we had made it. Next thing I knew we were on the ground.

ROLEND R. DUBE, Cpl, Air Corps, Radio Operator.

: Group Operations Officer.

1. I was riding just behind the ball turret at take-off time. When we were about half way down the runway I noticed #1 engine was on fire. I felt that we were going to crash so I braced myself for the fall as soon as we came to a stop I was first out of the ship. I ran around to the front of the ship and the engineer was coming out of the ship. We helped the toggelier away from the ship and waited for the ambulance.

SUBJECT: Accident report on Aircraft 42-97263.

TO : Group Operations.

1. Sgt. Dupas, E.G., ASN 38497039, flying as Tail Gunner on a combat mission was in the radio room of the B-17 for take-off.

The weather was adverse and the runway very slippery in my opinion. The plane was taking off when I noticed that is was acting queer and then before I knew what happened we hit the earth and slid along the ground. My observation was limited since I was in the radio room, but in my opinion the pilot and co-pilot did a remarkable job of flying and displayed coolness in crash-landing the simplane.

EMETT G. DOPAS, Sgt, Air Corps, Tail Cunner.

FIVE HUNDRED FORTY SEVENTH BOMBARDMENT SQUADRON (H) ARMY AIR FORCES Office of the Operations Officer

13 January 1945.

SUBJECT: Accident report on Aircraft 42-97263.

TO : Group Operations.

1. I was sitting in the radio room on take-off. I felt the plane lift and then the Engineen seemed to slow down. The next thing I knew the plane was on the ground and the dirt and snow were flying around in the room. It seemed like all the equipment was flying around also.

L. F. BRECHER, Sgt, Air Corps Waist Gurner.

STATEMENT BY SGT. PRANCIS SAYERS, 33833435, CONCERNING AIRCRAFT ACCIDENT ON 10 JANUARY 1945.

On the engine runup all instruments were functioning normally. At the start of the take-off there were still no indications of impending trouble in any of the four engines. I started calling the airspeed at fifty, I continued calling till it had reached one hundred and twenty five. I heard nothing during the run to arouse my suspicions. I did, however, notice that we stayed on the ground longer than we would normally. I would say the airspeed was between a one hundred and fifteen to one hundr3d and twenty before we left the runway. The airspeed had reached one hundred and twenty five when I glanced at the RPM guage and saw mumber one RPM was dropping. I lacked out at at the engine and saw it was on fire. The flames had not as yet appeared very prominent out the cowl flaps but the red glow was still very visible. I shouted to the pilot and co-pilot that number one was burning. I looked again at the instruments and noticed number two RPM was dropping. How far it dropped I do not know. I then tried to turn the manifold pressure guage to ten. While I was attempting to lift the latch, I yelled to the pilot to pull mumber one fuel shut-off toggle switch. I saw him reach the toggle switch and the next thing I knew we had crashed. What position the throttles were in when we hit I do not know.

> FRANCIS SATERS, 33833435, Sgt., Engineer.

MEADQUARTERS AAF STATION NO. 106 Office of the Flying Control Officer

14 January, 1945.

SUBJECT: Aircraft . Accident.

- D : COMMANDING OFFICER, AAF Station No. 106, AFO 557, U.S. Army.
- 1. At approximately 0900 hours January 10, 1945 aircraft #7263, priot Lt. Whiteside was taking off. This was during the operational take off.
- 2. Apparently the pilot got off the left side of the runway. The pilot managed to get the aircraft into the air, but started descending rapidly. The pilot crash landed the aircraft approximately One (1) mile north east of the airdrame.
 - 3. Crash tender and ambulance was dispatched.
