(Brief narrative of accident. Include statement of responsibility and recommendations for action to prevent repetition)

Captain Myrick, while flying as Instructor Pilot, took off to shoot transitional landings with Lt. Daniel and Lt. Johnson. They left the landing gear down, stayed in the traffic pattern, and entered the final approach for a landing. The airplane had a normal gas load of 2h00 gallons and was fully equipped for combat operation. It did not, however. have any bomb load or a full crew complement. The engineer checked the gear with the hand crank while on the base leg. Although Captain Myrick wanted Lt. Daniels to bring the airplane in at a slightly higher rate of speed, the caravan operator and Major Bean, who was preparing his aircraft for take-off, witnessed the approach and landing of Captain Myrick's aircraft and their statements concur in that the approach was normal and the landing was a good one. The airplane did not appear to hit hard, nor did it bounce or give any indication of being landed hard. The airplane proceeded down the runway for a short distance, swerved into the grass, and ground looped back on the runway as the right gear collapsed and the right wing dragged the ground.

Responsibility for this accident is attributed to 100% material failure.

There have been several cases on this base alone in the past few months where similar accidents have occurred when the 3/4" drag strut support clevice bolt failed. It is the opinion of this board that these bolts are not strong enough to support a B-17G aircraft under loaded conditions, as they have to be flown in a combat zone.

This landing gear had been checked on the daily inspection the afternoon of December 4th in accordance with provisions of inspection as prescribed in the Boeing Field Service News Number 33, dated 22 May 1944, and was found satisfactory.

Recommendation for preventive action: It is recommended that, to prevent accidents of this nature in the future, all B-17G aircraft be modified to employ the one inch drag strut support clevice bolt.

HEADQUARTERS AAF STATION NO. 106 Office of the Flying Control Officer

7 December, 194

SUBJECT: Aircraft Accident.

TO : COMMANDING OFFICER, AAF Station No. 106, APO 557, U.S. Army.

- 1. At approximatly 1100 hrs aircraft #7121 pilot Lt. Johnson called for landing instructions. Landing instructions and QFE was passed him by R/T.
- 2. The Pilot made a normal approach on runway 24, the aircraft touching down in a three point manner. The aircraft continued down the runway approximatly 40 yards when the right undercarriage collapsed.
- 3. The aircraft skidded down the runway to the inter-section of the north-south runway where it did a 180° turn comming to rest facing the landing runway.

4. Ambulance and crash tender were dispatched.

J. W. LOTER, 1st Lt., A. O., F. O. O.

STATEMENT: BY CAPT. KENNETH D. MYRICK, 0-750261. CONCERNING LANDING ACCIDENT OF 3-17 42-107121 on 5 DECEMBER 1944.

1. We had clearence to make follow through landings; Control instructed us to call in on down-wind leg and approach, which we did, On down-wind leg. I had the Engineer to theck landing goar. I gave the Pilot one third flaps and set turbos. It. Baniel was making good approach and Engineer was calling off the air speed. Then the speed dropped to 115, I told Lt. Beniel to add a little power. Speed dropped to lie and I told him to add more power. Not noticing any change in power, I looked at the throttles to be sure he was adding power and they were 3/4 open. Then we hit the runway, I did not notice any particularly hard jost at alle I, therefore, am sure it was a material failure. It. Beniel didn't know that the right landing goar buckled and I sould hardly detect it myself. With only left gear operating, we started going off to left side of runway. It. Beniel, not knowing about the buckled gear, started giving it power to get back on the runway. I immediately grabbed the throttles and gave more power to #3 & #4 engines and took it off of #1 & #2 engines in order to get off the runway and into the grass, be cause we had a 2400 mailon gas load. We had berely gotten off the edge of runway when we hit the north-south runway. Then we jerked the throttles off and started cutting the switches off. Everyone got out of the ship uninjured.

Tenneth & Marion, Marion Dept., Air Corps, Asset Ques, Officer, 546th Bomb Sq.

113

STATEMENT: BY 1st LT. THOMAS C. DANIEL, 0-764248, CONCERNING LANDING ACCIDENT OF B-12 42-107121 ON 5 DECEMBER 1944.

1. I was making transitional landings. Capt. Myrick was flying as instructor pilot. Take off and approach to landing runway were normal. The engineer was calling off air speed. I was only using 2/3 flams due to a slight cross wind from the right. The sirspeed was between 126-115 till mearing the end of runway when it read 110, I started easying throttles forward but souldn't feel any increase in power. Capt. Myrick told me to increase air speed so I kept putting throttles forward but sould tell so difference in power. After hitting runway I didn't know landing goar had buckled and Lt. Johnson who was standing behind me didn't either. I started to give power to 1 & 2 engines because well were pretty close to left side of runney when Capt. Myrick took control of throttles because he know landing goar had buckled and was wanting to get on to the grass. We rolled some distance before right wing fell and prope hit the runways Causing us to ground loop. We had a 2400 gallon gas load and had made no previous landings. The wheels had not been up at any time. Capte Myrick had the Engineer check the wheels with the hand erank on the base leg.

2. We were approximately 180 ft, from landing runway when sirspeed read 180 m.p.h. and the throttles were over half way open. I could feel no bed far when hitting runway and we landed three points.

Momor C. Waniel
THOMAS C. MATEL.
1st Lt., Mir Corps.

STATISHED. H. T/SOT. LESTER A. WALCOTT, 36418541, CONCENSING LANDING ACCIDENT OF D-17 42-107121 ON 5 DECEMBER 1944.

l. I was Engineer on A/C 197121 Filoted by Lt. Desired with Capt. Myrick riding as instructor pilot. We were going to shoot landings. We came in an final approach which was all right. I checked the landing gear a little bestore the final approach. The landing gear was down and locked. I was standing in between the Filot and Co-pilot seat calling off air speed. The air speed was 115 when Capt. Myrick call for more power. Lt. Daniel pushed the throttles cheen alouly, but it did not have any affect on the engines. By that time the air speed had Gropped to 105 and Lt. Beniel applied more throttle but it also had no effect on the aircraft. The I.A.S. then dropped to a 100 when we hit the runway. The landing was a good landing. We did not hit hard or bounce, but after we hit the right landing gear gave way, which caused us to run off the runway. After which we ground looped.

Julin 9. Wal LESTER A. WELCOTT. 1/841., 36418541.

held

STATISHENT: BY 2nd LT. DONALD B. JOHNSON, 0-768569, CONCERNING LANDING ACCIDENT OF BAI7 42-107121 ON 5 DECEMBER 1944.

l. I was flying as fourth man in cockpit behind Filco. The approach was flown at a normal airspeed as far as I noticed. About 200 or 300 feet, approximately, from end of runway, Filot was adding a little power to bring it into the field. The way it looked to me the engines weren't delivering any power. The Filot had full throttle but with no apparent response from the engines. We hit the runway and the right gear washed out, unknown to myself at the time. The landing in my estimation wasn't hard enough to wash out a gear. The result was a ground loop.

DONALD E. JOHNSON, 2nd Lt., AIR CORPER STATEMENT BY MAJOR ARTHUR E. BEAN, JR., CONCERNING ACCIDENT OF 5 DECEMBER, 1944, INVOLVING AIRCRAFT B-17G 42-107121.

I was sitting on the east-west runway facing the landing end of #24 so I saw the gircraft on the approach. I watched this aircraft come in and make a normal landing, a good landing. It started rolling down the runway alright but after twenty or thirty feet down the runway the right side seemed a little low. I thought it was a collapsed shock strut but it kept getting lower and then I saw him apply the left brake. It continued to go down and the wheel went up and under. It looked to me like he was trying to get it off the runway. He practically got it off when it came around and right back on again. The landing itself was a very smooth landing.
